## Loading \& Concentration Calculations

## Monthly Average (all of the samples in a month) <br> Weekly Average (samples within a certain week)

$$
\begin{aligned}
& \mathrm{C}=\text { concentration } \\
& \mathrm{F}=\text { flow } \\
& \mathrm{L}=\text { loading }
\end{aligned}
$$

## NOT Continuous Recorder

## Concentration

Concentration Average=

$$
\frac{\mathrm{C} 1+\mathrm{C} 2+\mathrm{C} 3+\mathrm{C} 4}{4}
$$

## Loadings

Loading Average=

$$
\frac{\mathrm{L} 1+\mathrm{L} 2+\mathrm{L} 3+\mathrm{L} 4}{4}
$$

Day $1 \quad \mathrm{~L} 1=(\mathrm{F} 1)(\mathrm{C} 1)(8.34 \mathrm{lbs} / \mathrm{day})$
Day $2 \quad \mathrm{~L} 2=(\mathrm{F} 2)(\mathrm{C} 2)(8.34 \mathrm{lbs} /$ day $)$
Day $3 \quad \mathrm{~L} 3=(\mathrm{F} 3)(\mathrm{C} 3)(8.34 \mathrm{lbs} / \mathrm{day})$
Day $4 \quad$ L4= (F4)(C4)(8.34 lbs/day)

## WITH Continuous Recorder

## Concentration

Concentration Average $\left(\mathrm{C}^{\text {fw }}\right)=$
$\mathrm{C} 1(\mathrm{~F} 1)+\mathrm{C} 2(\mathrm{~F} 2)+\mathrm{C} 3(\mathrm{~F} 3)+\mathrm{C} 4(\mathrm{~F} 4)$
$\mathrm{F} 1+\mathrm{F} 2+\mathrm{F} 3+\mathrm{F} 4$
Loadings
Loading Average=

$$
\mathrm{C}^{\text {fw }} \times \frac{\mathrm{F} 1+\mathrm{F} 2+\mathrm{F} 3+\mathrm{F} 4}{4} \times 8.34 \mathrm{lbs} / \mathrm{day}
$$

## Fecal Coliform Geometric Average

Geometric Mean $($ Average $)=$

$$
\sqrt[n]{(C 1)(C 2)(C 3)(C 4)} \ldots \ldots .
$$

Geometric Mean (Average) is the product of all the sample values followed by taking the nth root of the resulting value where $n$ equals the number of samples

Example: 4 samples of $150,75,200,24$
Multiplied together equals 54,000,000
The 4th root equals 85.72

For more information, see the EPA NPDES Reporting Requirements Manual on the Water Enforcement page of the LDEQ public website at www.deq.louisiana.gov.
